

**MODULAR TABLE
CONCEPT**

Note that these plans are intended for the fabrication of a preliminary real-world test of the slot joint and trestle assembly.

Questions we are hoping to answer:

1. Is the slot joint practical to fabricate?
2. How stable is the assembled table base?
3. What are some practical ways to fasten parts that enable easy disassembly? (screws?)
4. Is there a need for additional components to stabilize assembly?
